

Observational Notes: Data

Beverly observing Sandra with her mentee: Tammy.

Observing: Sandra's interactions with Tammy (the teacher) both were friendly and where open with each other.

How the lessons go? From what I observed you did just fine, the students were actively on task, and the teacher was enjoying the experience.

Did the teacher get really frustrated about anything? Tammy was calm and in control she did not seem to have any problems with the technology or the students.

Did the students stay on task the whole class period without much coaxing? Student seemed actively engaged in the lesson. Students were grouped together in two's and were discussing how to finish the project. Walking around the room you were able to see and hear each group of students engaged in how best to use the photos and information found about the memorial.

What would you change about the lesson if anything? From my observations I would not change anything students seem to enjoy creating the brochure and could activity discuss the project based on the information learned from the reading materials.

Were the students successful at meeting the objectives? Yes, the students were successful they were able to use the computer and create a brochure using the criteria set up by the teacher.

Did you experience any technology problems during the lesson? During my observation I could see no problems dealing with technology the equipment worked fine and students were having no problems logging on to the internet or school servers.

Did you feel like you accomplished your goals as a mentor? I hope I did my job as a mentor, to be there when problems arose or discuss any problems Sandra might have had in dealing with her teacher.
