Discussion 2: Cross-platform Sites – More Than Just PC vs. MAC

**Web Site:** Scribbles Kids Art, an art web site for children.

<http://www.scribbleskidsart.com/>

Cross-platform Criteria Tested

Web Browser		Screen Size		
Netscape	Internet Explorer	800x600	1024x768	1280x1024
Yes	Yes	Yes	Yes	Yes

The web site was designed for use with both Netscape and Internet Explorer. No difference was seen between the browsers. At the 800x600 screen size the words were rather large but readable, good for students that need to read in a larger print. At 1024x768, the average setting for screen size on most new computers, the web site filled the screen and was easily viewed. At the 1280x1024 screen size the web site filled the screen and was still easy to read. The Scribbles Kids Art web site tested successfully for cross-platform.

**Web Site:** T. Barlow's MTTC Page

<http://www.edtech.escl1.net/~tbarlow5956/index.htm>

Cross-platform Criteria Tested

Web Browser		Screen Size		
Netscape	Internet Explorer	800x600	1024x768	1280x1024
Yes	Yes	Yes	Yes	Yes

Tiffany's web site looked great viewed on Netscape or on Internet Explorer. Her pictures looked great viewed at all the screen size settings and so did the text. At 1280x1024 her text was small but still very readable. Tiffany's web site tested successfully for cross-platform.
