

Notes and Observations:

[Sandra observing Beverly with her mentee: Ms. M. Wilson.](#)

The interaction between Beverly and Ms. Wilson was one of mutual respect. Ms. Wilson was able to communicate her thoughts about the project and its outcome with enthusiasm.

Working with Ms. Wilson was interesting she was able to express her appreciation for the new information she used during this time period, and is eager to continue learning new techniques she can use in her classroom.

[How did your lesson go?](#) I was able to observe bits and pieces of the lesson being taught over the last two weeks. Because this is an honors class the students went much faster. Students quickly picked up information and processed it producing a quality I was not expecting from middle school students.

[Did the teacher get really frustrated about anything?](#) Ms. Wilson did not seem frustrated with how the lesson progressed she made the comment that because of the one-to-one mentorship from Beverly she was more confident in working with the computer and the students.

[Did the students stay on task the whole class period without much coaxing?](#) Students were observed staying on task. If students were not on task the teacher quickly moved to that station re-engaging the student and getting them back on task.

[What would you change about the lesson if anything?](#) I asked Ms. Wilson if she would change any thing about the lesson, and she stated that she would like to develop more power points to go along with her lessons.

[Were the students successful at meeting the objectives?](#) Seeing the finished product I would say that the students were extremely successful in meeting all the objectives the teacher expected and more.

[Did you experience any technology problems during the lesson?](#) While there were no problems on the day I observed, Ms. Wilson did say that one day the computer labs were down, and that Beverly help her direct the students in the library to find sources not on line to use.

[Did you feel like you accomplished your goals as a mentor?](#) It was interesting observing a lesson and a little strange to observe the two teachers working together they worked quietly and quickly to overcome any obstacle that the students encountered on the computer or in searching for needed information.
